DETAILED ACTION

Election/Restrictions

1. A telephone call was made to Jae Park on 7/27/2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 24-46 and 68-71, drawn to a specific **alphabetic character** inputting device, classified in class 341, subclass 22.

Group II, claim(s) 47-71, drawn to a specific **symbol character** inputting device, classified in class 341, subclass 22.

Art Unit: 2612

Since claims 68-71 belong a general generic character/symbol inputting method, therefore the method of claims 68-71 can be used with either the alphabetic character arrangements of claims 24-46 or with the symbol character arrangements of claims 47-71. Therefore, claims 68-71 are grouped with both claims 24-46 (group I) and with claims 47-67 (group II).

Inventions of groups I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination group I has separate utility such that the arrangements of the alphabetical characters of group I can be used in any input device without requiring the arrangements of the symbol characters of group II and vice-versa. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR

Art Unit: 2612

1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
